

ABSTRACT OF THE DISCLOSURE

The present invention is directed to a flexible wrist bracelet that has a pivotal receiver for a stick of a lollipop and a cover for the entire lollipop that lays against the arm of the user or wearer. The cover for the lollipop can be spring-loaded and have an actuating member to swing the lollipop up for accessibility to an edible end. In the other embodiment, the flexible wrist bracelet gently encompasses the wrist and a securing member receives a piece of candy and securely holds the candy in an edible position, and there is a cap that is securely attached to the flexible wrist bracelet and covers the securing member. The candy is completely covered in the securing member and protected from dirt and debris while consumption of the candy is halted.
